

Platform Engineering Manager Job Details

Position Overview

Lead and oversee the Platform Engineering organization, comprising IT, Site Reliability Engineering (SRE), and Foundation (Developer Services) teams. This strategic leadership role is responsible for building internal developer platforms (IDP), ensuring system reliability and scalability, and optimizing the software delivery lifecycle to support our FinTech products and business agility.

Key Responsibilities

Strategic Leadership & Team Management

- Lead and mentor cross-functional teams including IT Operations, SRE, Cloud Foundation, and Developer Experience
- Define the roadmap and strategy for the internal platform to reduce cognitive load for product developers
- Manage budgets, resource allocation, and vendor relationships for all platform-related initiatives

Platform & Infrastructure Engineering

- Oversee the design and implementation of scalable, secure, and reliable cloud infrastructure (AWS/Azure/GCP) and hybrid environments (including on-premises IDC)
- Drive the adoption of Infrastructure as Code (IaC) and GitOps practices
- Build and maintain Internal Developer Platform (IDP) including Service Catalog, self-service provisioning tools, and resource inventory and audit capabilities
- Develop standardized service frameworks, shared libraries, and microservice templates to accelerate application development and ensure consistency

Reliability & Operations (SRE/IT)

- Establish and enforce Service Level Objectives (SLOs) and Error Budgets to balance reliability and velocity
- Oversee 24/7 incident management, root cause analysis (RCA), and disaster recovery planning
- Ensure the stability and security of corporate IT services (Identity Management, Network, End-user Computing) and production environments

Developer Productivity & Tooling

- Standardize CI/CD pipelines, build systems, and observability stacks (Logging, Monitoring, Tracing)
- Foster a culture of automation to eliminate toil across all engineering verticals
- Collaborate with Product Engineering leaders to identify friction points and improve Developer Experience (DevEx)
- Leverage AI technologies to enhance platform capabilities, such as intelligent code assistance, automated troubleshooting, configuration recommendations, and more to boost developer productivity

Compliance & Security

- Partner with Security and Compliance teams to bake security into the platform (DevSecOps)
 - Ensure all infrastructure and processes meet regulatory requirements (e.g., PCI-DSS, financial regulations) and support external audits
-

Required Qualifications

Education & Experience

- Bachelor's or Master's degree in Computer Science, Engineering, or a related field
- 7+ years of technical experience in software engineering or infrastructure, with at least 3 years in a leadership role managing managers or multiple teams

Technical Expertise

- Deep understanding of Cloud Native technologies (Kubernetes, Docker, Helm)
- Proficiency in Public Cloud platforms (AWS, GCP, or Azure) and hybrid cloud architectures
- Strong knowledge of SRE principles (Observability, Chaos Engineering, Incident Response)
- Experience with DevOps tools (Terraform/Ansible, GitLab/GitHub Actions, ArgoCD, Prometheus/Grafana)
- Solid foundation in networking, security, and distributed systems
- Experience with service frameworks, API design, and microservice architectures

Leadership & Soft Skills

- Proven track record of driving "Platform as a Product" thinking
 - Excellent stakeholder management and ability to translate technical strategies into business value
 - Strong problem-solving skills and ability to make decisions in high-pressure environments
-

Preferred Qualifications

- Experience scaling engineering organizations in FinTech or highly regulated industries
- Hands-on experience with modernizing legacy infrastructure and migrating to microservices
- Active contribution to the tech community or experience implementing Backstage or similar developer portals
- Practical experience developing internal service frameworks, SDKs, or automation tools
- Familiarity with AI/ML technology applications in developer toolchains or platform optimization
